Received January 20, 2024; Accepted February 11, 2024; Epub February 15, 2024; Published February 28, 2024

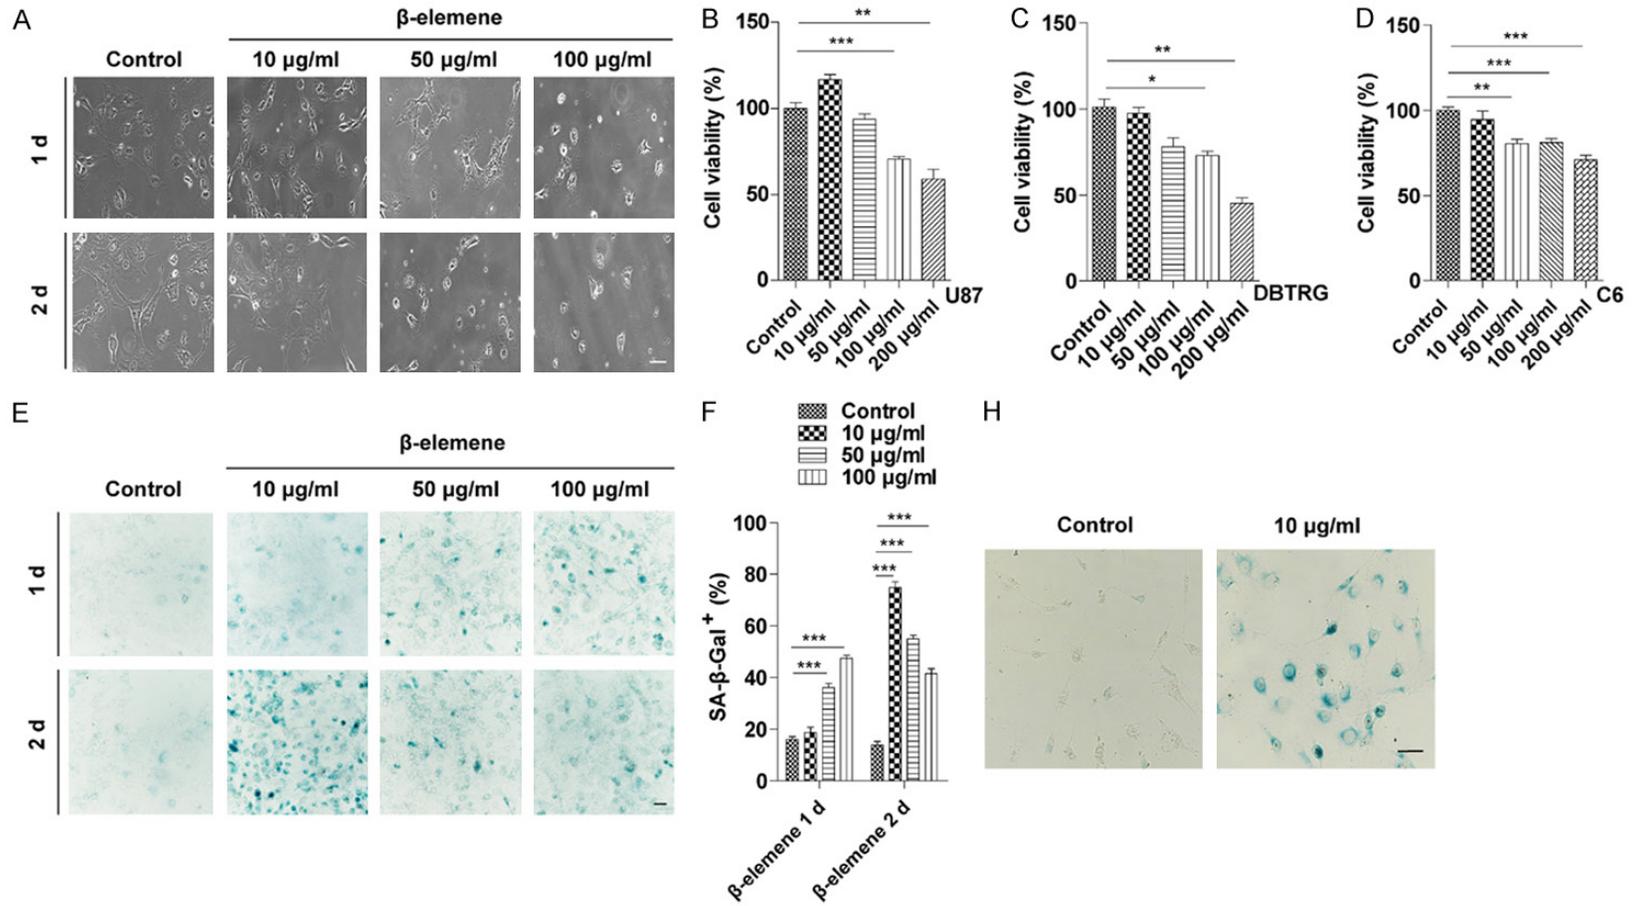

In this article, we found that a mistake happened during figure organization: the same typical images of C6 cells treated with 10  $\mu\text{g}/\text{ml}$   $\beta$ -elemene for 2 days were inadvertently shown in both **Figure 1A** and **1G**. So, we would like to publish this Erratum to reflect this change. The error does not change the scientific conclusions of the article. We would like to apologize for the errors and any inconvenience caused.

The corrected **Figure 1** is as follows.

$\beta$ -elemene promotes glioma cells senescence

$\beta$ -elemene promotes glioma cells senescence

**Figure 1.**  $\beta$ -elemene promoted the premature senescence of C6 cells. (A) Representative images of C6 cells in the bright field treated with control or different concentrations of  $\beta$ -elemene for 1 day or 2 days. (B-D) The effects of  $\beta$ -elemene (treated at 10  $\mu\text{g/ml}$ , 50  $\mu\text{g/ml}$ , 100  $\mu\text{g/ml}$  and 200  $\mu\text{g/ml}$  for 1 day) on U87 (B), DBTRG (C) and C6 (D) cell viability detected by CCK8 (n=5). (E) Representative images of SA- $\beta$ -Gal staining of C6 cells treated with control or different concentrations of  $\beta$ -elemene for 1 day or 2 days. (F) Quantification of the percentage of SA- $\beta$ -Gal<sup>+</sup> C6 cells over total cells as shown in (E) (n=15). (G) Representative images of C6 cells in the bright field treated with control or 10  $\mu\text{g/ml}$   $\beta$ -elemene for 1, 2, 4, 6, 8, or 10 days. (H) Representative images of SA- $\beta$ -Gal staining of C6 cells treated with control or 10  $\mu\text{g/ml}$   $\beta$ -elemene for 2 days. (I) Quantification of the percentage of SA- $\beta$ -Gal<sup>+</sup> C6 cells over total cells as shown in (H) (n=15). D, day. Scale bars, 20  $\mu\text{m}$ . Data were mean  $\pm$  s.e.m, \* $P < 0.05$ , \*\* $P < 0.01$ , \*\*\* $P < 0.001$ .
