Effects of ATP treatment on p53 protein and immune function in patients with leukoplakia vulvae [Retraction]

Tang SS, Lv B. *International Journal of Clinical and Experimental Medicine*. 2020;13:7232-7240.

We found that the data in Table 1 were not statistically presented in an appropriate manner and should not all be expressed as mean \pm standard deviation values. Data conforming to the normal distribution were expressed as the mean \pm standard deviation, and those not conforming to the normal distribution were expressed as the applied median \pm quartile. In addition, we decided to describe the effects of

ATP therapy on p53 protein and immune function in patients with rare white plaques with a more advanced and clear analysis. We will reorganize the manuscript to ensure the scientific validity and accuracy of the experiment. It is therefore with great regret that we have decided to retract this manuscript. We sincerely apologize to all those staff associated with the manuscript, including the editors, reviewers and others, for any inconvenience caused by the retraction.
