Pterostilbene attenuates inflammation in rat heart subjected to ischemia-reperfusion: role of TLR4/NF- κ B signaling pathway [Retraction]

Wang C, Sun H, Song Y, Ma Z, Zhang G, Gu X, Zhao L. *International Journal of Clinical and Experimental Medicine*. 2015;8:1737-1746.

In our recent study, we found that pterostilbene might induce apoptosis in the heart and can be harmful, and we are now focusing on the phe-

nomenon. The conclusion in the article is not so convincing to a great extent and we want the article to be retracted until the conclusion is definitely convincing.
