# Targeting survivin suppresses proliferation and invasion of retinoblastoma cells *in vitro* and *in vivo* [Retraction]

Liu KX, Liu YY, Zhao GQ. *International Journal of Clinical and Experimental Pathology*. 2017;10:9352-9361.

I have published the above paper in your Journal. However, current research findings of the first and the corresponding authors are in conflict with previous experimental results published in this paper. Also, other authors did not agree to publish this paper; so I request to withdraw the paper. The details are as follows:

The results reported in **Figures 2 and 3** (Effect of siRNA on proliferation, viability, apoptosis, invasion, and migration in Y79 cells *in vitro*) were not able to be replicated, in our subsequent studies.

I would like to apologize for any inconvenience caused by the withdrawal of this paper.
